Bicycles Become Instrumental in Saving an Endangered Region

An enormous amount of our work here at P4P is based on reaching out to people and organizations for the support we need to keep our bike collections a success and our partners supplied with cycles and parts for maintenance and repair. When an organization initiates the contact, it tells us our efforts are working and we are making a difference. Most recently, it was Fumiji Aoki of the Turtle Conservancy offices in New York City who contacted David Schweidenback to arrange the collection and shipping of bicycles to rangers working for Paso Pacífico in southwestern Nicaragua. The difficulty in navigating the rough roads and changing terrain over long distances on foot or in the rarely available buses in this region make reliance on bicycles essential. P4P immediately got to work filling this need.

We reached out to Kate Dolkas, a conservation associate based in Paso Pacífico’s offices in Ventura California, to fill us in on who is going to be using the bikes and how they will fit into the overall mission of their organization: “Our ranger teams comprise 20 men and women, 12 Forest Rangers and 8 Sea Turtle Rangers. All Paso Pacífico rangers are local residents of southwestern Nicaragua and many of them work as farmers or 2-3 hours away in Managua in addition to their employment with us.

The rangers work in the Paso del Isthmo, a narrow isthmus of land in southwestern Nicaragua between Lake Nicaragua and the Pacific ocean. This area is characterized as dry tropical forest where an intense rainy season is followed by extremely dry conditions every year. Rich in biodiversity and a crucial corridor for birds, mammals and amphibians, it has been devastated by extreme deforestation, resulting in habitat destruction and migratory corridor disruption. Tourism is also increasingly affecting beach areas. Our forest rangers hike through dense dry tropical forest to monitor sites for signs and sightings of spider monkeys, migratory birds and parrots, amphibians and small mammals. They collect and analyze population data to provide us with baseline information about each species and help us understand how to better protect them from deforestation and climate change.

The sea turtle rangers are instrumental in protecting the declining sea turtle populations that rely on Nicaragua’s beaches year after year to lay their eggs. They are responsible for patrolling beaches that are prime nesting sites for Olive Ridley, Hawksbill, Leatherback, and Green sea turtles. Turtle egg poaching is a common illegal activity in Nicaragua, and the rangers help to combat against this practice by patrolling the beaches at night when turtles lay their eggs and by implementing our incentive program in which poachers receive money in exchange for the eggs they attempt to steal. Sea turtle rangers also care for nests in Paso Pacífico’s sea turtle hatcheries, where they record the number of eggs that successfully hatch and the baby sea turtles that then make it to sea.

Having the bikes is so special because all of our rangers live and work in the rural communities of the Paso del Isthmo and many of them do not own vehicles or bicycles, causing them to rely...
PRESIDENT’S MESSAGE

This spring we are ready for a really exceptional year. First we are expecting our production to rise closer to our norm, which means we will make more shipments. Secondly, our long-term partners are doing amazing work and we have an exciting new program.

I’m very pleased with the success of our overseas partners which should be demonstrated by the stories we bring you in this newsletter. From the jewel in the crown, Rivas Nicaragua, a program we started in 1992, to our most recent addition, a sewing machine program in Dar es Salaam Tanzania, it’s good when a plan works!

Our model is to work directly with the nationals of the country in question. It is our belief that the bicycle is a product of the Industrial Revolution and there is someone everywhere who can keep them repaired. It does help some time to have an intermediary and that is especially true in the country of Moldova where we have had great success. Our model is to have continual shipments for many years. In the small isolated towns of Moldova things work differently. Grozesti Moldova is a town of just 2000 people. One or two shipments will meet their needs.

There something else about this new Moldova program which excites me. This effort has been spearheaded by a Peace Corps volunteer. Peace Corps volunteers are some of the hardest working members of our government and are doing the most important work imaginable, winning hearts and minds to promote Peace. A new sewing initiative in Tanzania is quite exciting, and who doesn’t like a good story about saving turtles. Our goal is to help families which are economically in distress, but what a win-win whereby giving these Rangers employment to help their families, they are also saving an integral part of the environment. Transportation truly affects every part of one’s life.

Thank you for your support. With your help, we are looking forward towards a very successful 2014.

Sincerely,
Dave
A PERSONAL NOTE FROM MOLDOVA

We love to hear from people whose lives have been touched by P4P and our partners. We have been contacted by a woman who is connected with the Peace Corps and is in the process of campaigning for P4P to come to Grozesti, Moldova. If all goes well, we will ship to them in early spring. Just one container of bikes can change the lives of people in this small isolated town. Here is her message:

“My name is Carol Stadden. I am a retired baker serving as a Peace Corps volunteer for two years in a small Moldovan village in Eastern Europe called Grozesti. Moldova is a country approximately the size of Pennsylvania and is considered the poorest in Europe. Peace Corp’s mission is to promote world peace and friendship with a commitment to improving the quality of life in each host country. I am in the Small Enterprise Development program. When I first arrived at [the] site, I heard there was a village where everyone rode a bike. How incredible! In 2005, a Peace Corps volunteer, working with P4P, had arranged for 500 bikes to be shipped to his village of Pelenia. I talked to the mayor of my village and she was eager to give Grozesti the same opportunity.

Many people in the village own bikes, but they are extremely old and heavy one-speed models unsuitable for navigating the rocky, hilly, unpaved roads of Grozesti. Because of P4P, the community will not only be able to purchase sturdy, quality bikes for an extremely affordable price but the bikes will enable farmers to get to and from their fields more easily and children to ride to and from school—sometimes as far as 5km. I hope to work with a group of high-school students to catalogue, repair, and sell the bikes so they can learn valuable business and employment skills. There is also the possibility that a community member will step forward to start a small bicycle parts/repair shop. Any surplus funds from this project would be used to assist them.

I am an avid cyclist back home and the first thing I did once I arrived in Moldova was to buy a bicycle. This is the perfect way for me to share my enthusiasm for cycling while promoting small business. These bikes are generating so much excitement in the village, I believe there may be a bicycle club in Grozesti’s future! To learn more about Grozesti, please go to grozesti.weebly.com. One of my first projects was to create this website as a means of promoting the village and assist me in integration.”

Look for updates on this endeavor. We hope to include more from Ms. Stadden as well as the specifics of a shipment to Grozesti by summer 2014.

MISSION STATEMENT

TO DELIVER ECONOMIC DEVELOPMENT AID BY RECYCLING BICYCLES AND SEWING MACHINES IN THE U.S. AND SHIPPING THEM TO THE PEOPLE OF THE DEVELOPING WORLD

Spring Bicycle Collections
Begin April 6th
Call Bev Merchant to book your collection date!

Sewing Machines Contribute to School Enrollment and Health Care in Tanzania
By Patricia Hamill

In October of 2013, with the generous support of grant money from one of our valued supporters, Clif Bar family foundation, P4P shipped 41 sewing machines to the region of Dar es Salaam (DSM) in Tanzania. Our partner there, Community Support Mission (CSM), works closely with those in poverty to help them earn their own living and create a healthy and sustainable lifestyle.

According to CSM’s director, Jonathan Mulokozi, four of the machines went to the Messack Secondary School, located in Kivule, in the District of Ilala. Of the 350 students, 60 are orphans and 42 are from very poor families. The machines’ primary use to date has been to sew uniforms for schools. The income earned from the production of this clothing has covered school fees among other difficult costs these children must meet if they are to have an independent and economically viable adulthood.

CSM also works with families or groups in need. They donated 3 machines to women whose families were struggling to maintain decent living conditions and hoping to stay together instead of dispersing for work in far-away districts or regions. One particular woman, Anna Ntimba, was fortunate in that she already knew how to sew; however, she did not have the income to afford to purchase her own machine. Her husband was recently diagnosed with a heart disease and could not easily support the family, much less pay the hospital bills. With the machine in hand, Anna was able to earn the income she needed to keep her family together and enable her husband to begin healing.

In January of this year, CSM donated sewing machines to 4 women whose families are in poverty and cannot afford to send their children to school. CSM has also pledged to provide 2 machines to each group of 3 people who wish to from their own business. As well, 2 secondary schools in Kagera are slotted to receive sewing machines so they can continue to earn income to cover basic school needs for local orphans.

Not all the partners we work with request both sewing machines and bicycles. When this combination does come into play, there are double the opportunities opened up to people in a region, thus increasing the odds that we can create a lasting positive impact. We are looking forward to receiving news and photos of the students and their families as more machines and the bicycles become available to them.

Guillermo
Guillermo Mendoza is a resident of the multicultural Costa Rican city of Limón. As he spends most of his time on his bicycle, making his living selling fresh fish and other food items, he makes certain to keep safe by wearing a helmet and reflective vest. Guillermo always has the freshest catch. The fishermen of Limón approach him daily to buy his fish to resell at the nearby fish market.
How do Bicycles and Sewing Machines Continue to Support FIDESMA’s Mission?
By Patricia Hamill

You’ve read about our partner in Guatemala, FIDESMA, the organization that promotes economic development through microcredit, training in textile design and agricultural programs, among other efforts. They are doing so much to contribute to the needs of the people in their region and we are pleased to have some updates for you.

Three young men, poor students, were awarded a grant from FIDESMA for employment training in welding. The funds were raised through the sale of the bicycles sent from P4P. Without the bicycles that were transformed into needed funds, these young men could not possibly have begun, much less finished, the four months of required training. They completed their course in November of 2013.

These young men also needed to be able to put these skills to use. This of course meant that they needed employment opportunities and a way to access the locations where they would work. A blacksmith shop was made available to them and there they created metal ornaments, bikes and candlesticks to generate the income that would continue to reinforce their financial independence. In December, these men were able to acquire bicycles that had arrived in the 14th container shipped from P4P and received by ECOLOBICI. They can now travel readily between home and work. Ease of travel was one of the obstacles the young men had to overcome since, as you’ve read so many times about so many of the people in our partners’ regions, they would have to pay for public transportation, walk many miles or, in this case, take a motorcycle taxi.

Now 6.00 quetzals (about .75 in US currency) a day are saved by using a bike and they have the added advantage of keeping in shape. They have benefited from ECOLOBICI’s project supported by P4P and they plan on continuing their studies and efforts at financial success in 2014.

In the container mentioned above, there were also 15 sewing machines, some earmarked for particular women who had visited the FIDESMA training center. These women, from Santa Apolonia in the District of Chimaltenango, work sewing typical huipil blouses mostly. These are traditional garments that are loose fitting like a tunic. Since these kinds of shirts are in demand, they stand to make a reliable income continuing to sew these and other viable pieces of clothing. There are more men and women who will be able to access these machines and learn how to use them or continue to work at their tailoring businesses.
Give Smiles With a Bicycle!
By Ened Mato

How nice it is to donate a smile! It is a grim fact that some Albanians face the indifference of passers by and the silence of fellow citizens in general. Many children are mired in a cycle of hopeless days without experiencing the joys of a real childhood and, confused, stare straight into the future without a sense of hope. Nearly 120 of these children at the Colourful Lodge and its twin centers, every day, find not only hospitality, accommodation and a warm meal, but above all the care, love and why not, the image of what they lack and miss: Home!

In the framework of the initiative which has already made possible the delivery of 100 bicycles in 10 similar centers in Albania, the New Year’s holidays at the Colourful Lodge came under the rhythm of chiming bicycle bells that were donated by Ecovolis in collaboration with Pedals for Progress. Ecovolis representatives spent the holidays with these wonderful children, helping them learn to pedal the colorful bicycles that they, before, could only watch go by on the noisy thoroughfares of the capital city. The little ones learned that use of these bicycles created an excellent opportunity to secure a beautiful, clean, green and friendly environment to live in, quite different from the dusty wild roads of the city they wander every day.

This is not all. The people from Ecovolis also promised that they would work with the children every week, to continue helping them ride safely and have fun. For these children it was wonderful discovering that bicycles from Pedal for Progress were previously used by their american peers, whose stories and names were shared.

It was so miraculous to see the smile on a young boy named Zino. He was the first to learn to ride a bike and even swore that one day he would become the fastest cyclist in the world. Little Izidora, who spent the day cleaning the windshields of “four-wheels” vehicles as they call them, said that she loved the bike exactly because it did not deliver those “disgusting fumes and that disturbing noise.” A child named Abel immediately began calculating the increased number of packages sold, if he was to rely on his own bike instead of his tiny legs.

One of the girls, Mira, she begged for one last ride and said she would have loved to have her own bicycle so she would have the opportunity to visit her mother during the day and show her her earnings. When she was told that there would be no “last ride” because those bicycles would be staying at the Colourful Lodge, her happiness was immense. Her felicity was shared among Adrian, Ihsira, Ledio, Daklea, Oriada, Teuta, Laert, Esdal, Landi, Artemis, Donna and dozens of other children, whose smiles were the most precious gift for the representatives of Ecovolis. “This is one of those cases, when you start making a gift, but you are the one receiving the most wonderful gift of all. To us this great gift was the smile of these kids,” Ened Mato, the Director of Ecovolis said. “Ecovolis in collaboration with Pedals for Progress is determined to continue this initiative. So far we have donated 100 bicycles in 10 centers and we are merely getting...
started. We will make other children smile by riding bicycles. And it’s not just about entertainment, but also presenting to them the vision of a beloved city, clean, and safe, since they are precisely the ones who walk on these streets every day.”

It is great discovering that besides the gift of a smile, there has been bestowed upon these children a chance for a new world view—a new, achievable dream for those who all they have had are dreams. All this from the presence of a simple bicycle. In the mean time, they are riding—and smiling—without even knowing that this may be may be a ride towards the future.

Miranda Family
Due to its warm, sunny climate, Tacares de Grecia in the Alajuela Province is one of Costa Rica’s main areas for growing tomatoes, the dry season being the most suitable for planting crops. The Miranda Family owns a small plot for producing tomatoes. They distribute and sell their goods through roadside vendors as well as deliver tomatoes directly to customers using bicycles outfitted with baskets, charging 1000 colones (approximately $2.00) for every 2 kilos of tomatoes.

Juan
Juan Rodríguez is 72 years old. He and his wife own a small plot of land (about 200 meters) in the outskirts of San Ramón, a city in the Alajuela Province of Costa Rica. Juan and his wife use their spare time to plant cilantro and celery. Juan’s bicycle allows him the time he needs to grow his crops. With it, he can get around his neighborhood and sell his produce easily and with no transportation costs.

World Cup fever.

Pedals for Progress’s mission is really to give these people a viable chance of a wonderful life. We certainly concentrate on employment opportunities and healthy transportation alternatives, but sometimes we stray. In the last shipment of 2013 to Guatemala we included 100 pairs of cleats and 18 used soccer balls. The soccer balls like large Styrofoam chips protecting the bicycles, and the soccer cleats just fall down between the bikes taking no space. Supplying sporting equipment is certainly not the most important thing we do and not something that we will ever do a lot of, but when we can put a smile like this on a young person, how can we not?
